It is now accepted that IT functions are a fundamental part of the competitive business model. Instead of simply offering services IT must ‘create value’ for the business. This practical title describes the
strong financial skills that IT managers must have in order to support: Operations: Finance departments rely heavily on IT managers being able to identify, track and measure costs - sometimes at a very granular level. Budgeting: the very technical nature of IT operations means that budgeting can be more complex than many other areas. Project Delivery: large technical project deliveries mean that costs can be correspondingly complex to account for. Business Modeling: pricing models rely heavily on IT managers' skills and accuracy. Where one service supports many commercial offerings a strong model is needed to apportion costs appropriately. Investment and business cases: a sound understanding of the financial contribution the IT assets make to the overall business is critical to gain support for ongoing investment. This outstanding title covers the main financial concepts that managers need to be familiar with in order for IT to take its proper senior place as a contributor to the business. It assumes a basic level of financial understanding and builds on the techniques required almost daily; therefore it is overwhelmingly practical and based on real-world scenarios. Not only are the techniques fully described but issues such as - roles, - implementation, - daily management and even - tooling are detailed.

While there is growing interest in IFRS within the US, interest outside the US has exploded. Weygandt's fourth edition of Financial Accounting: IFRS highlights the integration of more US GAAP rules, a desired feature as more foreign companies find the United States to be their largest market. The highly
anticipated new edition retains each of the key features (e.g. TOC, writing style, pedagogy, robust EOC) on which users of Weygandt Financial have come to rely, while putting the focus on international companies/examples, discussing financial accounting principles and procedures within the context of IFRS, and providing EOC exercises and problems that present students with foreign currency examples instead of solely U.S. dollars.

This second edition has also introduced a number of new chapters covering strategy-management control as practice, grounded theory approach, institutional logic and rhetoric, social interaction theory, actor-network theory and practice theory. The book is primarily intended for research students and academic researchers.
